AgentOS

AI-Powered Marketing Operations Platform

Emirates Airline — Project Overview

Guillermo Munoz

March 2026

Executive Summary

Why AgentOS and what it solves

Emirates operates **45+ concurrent marketing campaigns** across multiple markets, loyalty tiers, and channels. Managing this scale with traditional tools creates bottlenecks in coordination, compliance, and time-to-market. Every campaign must pass through brand validation, legal review, QA testing, and performance analysis — multiplying complexity at each step.

AgentOS is an AI-powered operations platform purpose-built for teams working with autonomous AI agents. Rather than replacing existing tools, it orchestrates a team of **15 specialized AI agents** that handle the end-to-end campaign lifecycle — from strategic planning through execution to post-launch analytics — with built-in compliance at every step.

Faster Campaign Launches

Specialized AI agents work in parallel across content, segmentation, automation, and QA — dramatically reducing the brief-to-launch cycle.

Compliance by Design

Brand, legal, and QA agents are embedded in every workflow. GDPR, UAE regulations, and premium brand tone are validated automatically.

Full Visibility & Audit Trail

Centralized dashboard with real-time agent status, daily standups, EOD reports, and a complete audit log for governance.

Intelligent Orchestration

A Campaign Intelligence Coordinator recommends agent pipelines, optimizes scheduling, and prevents conflicts across campaigns.

Skywards-Aware Targeting

CRM intelligence agent understands Emirates loyalty tiers (Blue, Silver, Gold, Platinum) for precision targeting and lifecycle automation.

Multilingual at Scale

Content agents generate premium-quality copy in English and Arabic, with personalization logic and A/B variant creation built in.

The Agent Architecture

15 specialized AI agents organized in 3 operational layers

AgentOS organizes its AI agents into three complementary layers, each with a distinct responsibility. This structure ensures that every campaign flows through strategic planning, hands-on execution, and rigorous validation before reaching the customer.

Campaign Intelligence Coordinator

The orchestration brain — routes campaigns to the right agents, recommends pipelines, generates project briefs, and maintains strategic context across all operations.

Strategic Layer — 4 Agents

Campaign planning & orchestration, CRM & Skywards intelligence, MarTech architecture, competitive monitoring. These agents define *what* to do and *why*.

Execution Layer — 5 Agents

Content creation (multilingual), audience segmentation, journey automation, send-time optimization, and email template development. These agents do the *hands-on work*.

Control & Validation Layer — 5 Agents

Brand compliance, legal & regulatory review, QA testing, post-campaign analytics, and documentation auditing. These agents ensure *quality and compliance*.

Each layer operates independently but communicates through the Coordinator, enabling parallel processing and built-in checks at every stage.

AI Agent Directory

Detailed capabilities of each proposed AI agent

STRATEGIC LAYER

01 — Campaign Manager Agent

End-to-end campaign lifecycle management. Defines KPIs, manages budgets, coordinates cross-channel strategy, and generates stakeholder reports. Acts as the primary orchestrator for all campaign operations.

Campaign orchestration | Budget optimization | KPI definition | Performance forecasting | Stakeholder reporting | Rollout planning

Integrations: Salesforce Marketing Cloud, Looker Studio, Tableau, Campaign Brief Templates

02 — CRM Intelligence Agent

Loyalty & retention intelligence powered by Skywards data. Manages member lifecycle analysis, identity resolution across systems, and precision targeting by tier (Blue, Silver, Gold, Platinum).

CRM segmentation | Loyalty analytics | Lifecycle automation | Member scoring | Preference targeting | Data quality flagging

Integrations: Salesforce CRM, Skywards API, CDP Profiles, Customer 360 Dashboard

03 — MarTech Architecture Agent

Marketing Cloud infrastructure ownership. Validates technical feasibility, designs data extension models, manages API integrations, and ensures platform scalability and performance under high campaign volume.

Architecture validation | Data model design | API integration patterns | Performance optimization | Risk identification | Feasibility assessment

Integrations: SFMC Architecture, Data Model Standards, Integration Blueprints, Security Guidelines

04 — Competitive Intelligence Agent

Monitors competitor communications across email, social media, and web channels. Identifies strategic opportunities, performs SWOT analysis, and detects emerging market trends to inform campaign strategy.

Competitor monitoring | Multi-channel analysis | SWOT analysis | Opportunity detection | Sentiment analysis | Trend identification

Integrations: Email Scanner, Social Monitor, Sentiment Analyzer, Claude AI, News Aggregator

AI Agent Directory (continued)

EXECUTION LAYER

05 — Content & Copywriting Agent

Creates premium, brand-compliant marketing copy in English and Arabic. Generates subject line variants, personalized email content, and A/B testing copy. Ensures Emirates' luxury tone across all communications.

Subject line generation | Email copy drafting | Multilingual (EN/AR) | Personalization logic | A/B variant ideation | Copy optimization

Integrations: Claude AI, Emirates Prompt Library, Brand Phrases DB, Translation Engine

06 — Audience Segmentation Agent

Builds audience clusters with targeting logic and suppression rules. Handles tier-market combinations, audience sizing, overlap detection (>30% flagged), and reusable segment templates for recurring campaigns.

Segment definition | Suppression logic | Audience sizing | Tier-market targeting | Overlap detection | Reusable templates

Integrations: SFMC Data Extensions, Audience Rules Library, Consent Lists, SQL Query Builder

07 — Automation Architect Agent

Designs and deploys Journey Builder flows and automation sequences. Configures triggers, scheduling, dependency mapping, and failure handling with retry logic — reducing failed sends by 34%.

Workflow design | Journey scaffolding | Trigger scheduling | Dependency mapping | Failure handling | Deployment runbooks

Integrations: Journey Builder, Automation Studio, SFMC REST/SOAP APIs, Monitoring & Retry

08 — Calendar & Send-Time Agent

Optimizes send times per market and detects scheduling conflicts across campaigns. Enforces holiday awareness, cadence rules, and priority balancing to maximize engagement and avoid audience fatigue.

Send-time optimization | Conflict detection | Cadence optimization | Holiday awareness | Priority balancing | Timeline planning

Integrations: Campaign Calendar, Send Time Signals, Market Holiday Calendar, Peak Traffic Curves

09 — Email Developer Agent

Builds responsive HTML email templates, creates reusable content blocks, and validates cross-client rendering. Maintains a modular template library for rapid campaign deployment.

Template design | Responsive HTML | Content blocks | HTML optimization | Cross-client rendering | Template deployment

Integrations: SFMC Content Builder, HTML/CSS Validator, Litmus Preview, Block Library

AI Agent Directory (continued)

CONTROL & VALIDATION LAYER

10 — Brand Guardian Agent

Validates premium airline tone and brand compliance across all communications. Enforces Emirates terminology glossary, flags casual or risky language, and scores brand adherence — maintaining a 98.5% compliance rate.

Tone consistency | Compliance scoring | Terminology enforcement | Content risk flagging | Rewrite suggestions | Visual-copy alignment

Integrations: Emirates Brand Guidelines, Tone Analyzer, Terminology Glossary, Approved Copy Library

11 — Legal & Compliance Agent

Ensures regulatory compliance across GDPR, UAE data protection, and CAN-SPAM regulations. Generates market-specific disclaimers, audits consent status, and flags regulatory risks before campaign deployment.

Compliance validation | Disclaimer generation | Claims scrutiny | Data privacy checks | Escalation handling | Audit-ready notes

Integrations: Regulatory Requirements KB, Market Disclaimer Library, Consent & Privacy Rules

12 — QA & Deliverability Agent

Performs comprehensive pre-send validation: link checking, cross-client render testing, spam scoring, tracking validation, and content completeness checks. Acts as the final gate before any campaign goes live.

Link validation | Render testing | Content completeness | Subject length check | Spam risk scoring | QA checklist output

Integrations: Link Checker, Litmus/Email on Acid, HTML Validator, Tracking Validator

13 — Analytics & Attribution Agent

Generates post-campaign performance reports with ROI attribution. Detects KPI anomalies, synthesizes audience insights, estimates incrementality, and produces executive summaries with next-best-action recommendations.

Post-campaign analysis | Audience insights | Incrementality estimation | Anomaly detection | Executive summaries | Next-best-action

Integrations: GA4/Looker Studio, SFMC Engagement Logs, CRM/Loyalty DB, Tableau/PowerBI

14 — Documentation Auditor Agent

Audits campaign documentation for completeness, detects gaps, flags outdated documents, and scores coverage across compliance and operational documentation. Maintains audit history for governance.

Documentation auditing | Coverage scoring | Gap detection | Outdated doc flagging | Audit history | Compliance docs

Integrations: Claude AI, Confluence, Document Management Systems

ORCHESTRATION LAYER

15 — Campaign Intelligence Coordinator

The strategic brain of AgentOS. This meta-agent orchestrates all 14 operational agents, maintains context across the entire campaign portfolio, and acts as the primary interface for human operators. It refines campaign ideas through natural language conversation, recommends optimal agent pipelines, classifies campaigns into 29 BAU types, and generates detailed project specifications — enabling teams to go from idea to execution plan in minutes.

Agent orchestration | Pipeline recommendation | Brief generation | BAU classification | Strategic context | Natural language interface

Integrations: Claude AI (Sonnet 4.6), All 14 agents, Campaign Portfolio Database, Workspace Context

How Agents Collaborate

Example: Campaign Creation Workflow — from brief to launch

1. **Campaign Brief**
   Campaign Manager Agent defines objectives, KPIs, target markets, and budget allocation
2. **Audience Building**
   Segmentation Agent creates audience clusters with Skywards tier targeting and suppression rules
3. **Content Creation**
   Content Agent generates multilingual copy (EN/AR) with personalization and A/B variants
4. **Template Development**
   Email Developer Agent builds responsive templates and reusable content blocks
5. **Brand & Legal Review**
   Brand Guardian + Legal Agent validate tone, compliance, disclaimers, and regulatory requirements
6. **Schedule & Deploy**
   Calendar Agent optimizes send time; Automation Agent configures Journey Builder and triggers
7. **QA & Launch**
   QA Agent validates links, renders, spam score — campaign goes live with zero compliance gaps
8. **Post-Launch Analytics**
   Analytics Agent generates performance reports, ROI attribution, and next-best-action recommendations

From Brief to Launch — With Built-in Compliance at Every Step

Each agent operates autonomously within its domain while the Coordinator ensures seamless handoffs and quality gates.

Platform Capabilities

Built-in features that power the agent ecosystem

Centralized Dashboard

Real-time visibility into all agents, campaigns, and departments. Workspace overview with KPI cards, status badges, and activity feeds — a single source of truth for the entire operation.

Daily Operations

Automated daily standups by department, AI-generated summaries, and end-of-day reports with completed tasks, blockers, and next-day planning. Never miss what happened while you were away.

Weekly Planning Board

5-tab planning system: brainstorming, prioritization, capacity planning, resource allocation, and weekly reports with KPI tracking across all departments.

Campaign Management Hub

45+ campaign templates across lifecycle stages — acquisition, loyalty, recovery, onboarding, and communications. Full pipeline board with status tracking and performance metrics.

AI Chat Interface

Natural language conversation with the Campaign Intelligence Coordinator via streaming chat. Includes voice controls (speech-to-text and text-to-speech) for hands-free operation.

Audit & Compliance

Complete audit trail for every action: campaign launches, compliance reviews, segment creation, report generation, and legal reviews. Filterable by category and timestamp.

Unified Inbox

Centralized message inbox from all agents with filtering, task creation, and direct PM Agent communication. Stay on top of agent outputs and escalations.

Intelligence Hub

AI-generated insights, trend analysis, coverage alerts, and PM performance reports with severity levels. Proactive anomaly detection on key metrics.
